Oracle APEX Developer (Senior)

Overview of the role:

As a Senior Oracle APEX Developer at our innovative software development company, you will play a pivotal role in leading the design and architecture of enterprise solutions built on the Oracle APEX platform. You will be responsible for identifying and shaping technical requirements in collaboration with business analysts, architects, and project management, ensuring alignment with enterprise architecture standards and long-term scalability objectives.

Your role will encompass high-level system design across Oracle APEX, PL/SQL, and Oracle ORDS-based API layers. You will define integration patterns for downstream REST services, including those built on Java Spring, and ensure secure, performant, and maintainable implementations. In addition to hands-on development, you will provide technical leadership, conduct quality assurance reviews, mentor developers, and guide architectural decisions that support high availability and cross-functional interoperability.

Requirements :

- Exceptional teamwork and communication skills with the ability to lead technical discussions.
- Advanced analytical and problem-solving skills within complex Oracle APEX environments.
- Expert-level PL/SQL development and SQL performance tuning expertise.
- Extensive experience architecting and developing Oracle APEX applications.
- Strong experience designing and implementing RESTful services using Oracle ORDS.
- Deep understanding of REST, JSON, API security, and integration best practices.
- Experience supporting and integrating with Java Spring-based services.
- Proficiency with version control tools such as GIT and familiarity with DevOps practices

Educational / Experience required:

- Bachelor's Degree in an appropriate field of study or equivalent work experience.
- 6+ years of experience in Oracle APEX, PL/SQL, and API-driven development.
- Proven experience mentoring junior and intermediate developers on design standards and best practices.
- Demonstrated ability to design scalable, secure enterprise-grade APEX solutions.
- Strong understanding of Web Services protocols such as REST and API design for extensibility and portability.
- Experience with Scrum/Agile development methodologies and enterprise delivery environments.

Additional information:

- Closing date:
- Type of role: Permanent
- Location: Hybrid Model (Centurion).
- Salary: to be discussed, in line with skills and experience.

This role represents a fantastic opportunity to join a respected team. If you are interested and meet the selection criteria, please send your CV to Keshnee Reddy-Chetty, Keshneer@icetech.io.
